A flexible combination of colour and texture: bottles in different designs for a collection of distinct, versatile colour masterbatches

- For blow moulds and plastics injection moulding tools featuring simple mould geometry and non-abrasive materials
- Development process, based on 3D digital print on a flexible film substrate, completed within a few days
- The film is simply replaced within the tool, no retooling required for new textures
- Suitable for fast design validation, material tests, product evaluations or small-batch production
